

## I am just a regular guy who couldnt find a job .

Posted by I am just a regular guy. - 05 Dec 2011 19:17

---

I am just a regular guy who couldn't find a job just like you so I decided to start my own business. Look in your local town at all the things sold. Nothing from you area is sold in your area even if there is a demand for it. Why is that? You can be the one to supply your area. Find what you love and when you do I will complete a completely free Web site targeted at your local area to sprout a new grassroots homegrown business in your area because I believe this is the only way to truly save America. Not fake tax cuts for fake &quot;small&quot; businesses. Start your own business. I will create an online Machine for you to advertise your skills. Cut out the middle man. Your Corporate Boss in your area by Quitting working for him and starting to work for yourself and hiring all the Americans they fired. I know this seems impossible but look what I have done for me and my family.

[www.eastexconstruction.com](http://www.eastexconstruction.com)

[www.lakefrontbuilders.com](http://www.lakefrontbuilders.com)

because of these two web pages and a passion to treat people right we have not stopped working. I can do this for anyone by cloning my site to the backend of yours even if you dont have one. If you have faith in yourself and believe you can do it. So do I and my part as your fellow American I Will Put You To The Top of All Search engines.

Just google anything that has to do with anything construction & boathouse building in Livingston Tx where I live.

Im an artist , singer , songwriter , and this is MY AMERICAN STAND.

Posted by Often Lost is my Social Tag fi - 05 Dec 2011 19:20

---

if you look for often lost , oftenlost on facebook youtube and or myspace you will find videos of the music and bands i have been in , in the past. I have just finished writing my Occupy Cd and plan to start a live grassroots homegrown tour all over America and hopefully the world.

On Jan 20 I will leave here in texas to head out over the world and record the entire process live through social media networks like google+ facebook twitter and youtube. tune in to find out what going on.

I want to write about and add a critique about this whole END THE FED dciussson. I'm not saying that this isn't an important issue, but I want to caution those who hold this close to their hearts from not being overly deterministic when they bring this topic up in conversation. I'm beginning to notice a few of you who are dissatisfied that this topic is not constantly and solely up for dciussson at all times. We have to recognize the difference between causal inference and dialectical relationships. Arguing that the dciussson of the FED should be of primary importance is healthy, but calling for its destruction to be our one and only goal is egoistic, and overly deterministic. What I mean is that this dciussson implies that the federal reserve is the root of the problem. It may be, I'm not well versed in monetary policy. But it is not the only conversation worth having. This would be as short-sighted as saying Al Gore invented the internet, therefore, we have Al Gore to thank for the creation of social networking and the rise of horizontal participatory democracy movements like this And ManBearPig. Our technology discloses our relationship with nature. A technological innovation with regards to the federal reserve question is the money commodity (a need to resolve the difference between the use-value and exchange-value of commodities we produce). This relationship is effected and effects, dialectically, our processes of production (labor), which in turn, dialectically relates to the reproduction of daily life (commodities we use and need every day) and which is further developed in a dialogue between our daily life and our social relations. This continuous process is itself a disclosure of the interaction of our social relations and the way we labor and produce. Our social relations dialectically effect and are effected by our mental conceptions, which in turn effect and are effected by our technology. These dialectical (not causal) relationships further show us the interconnected interactions between our mental concepts, our processes of production, our social relations (and the relationship between our processes of production and social relations) and how they all relate back to our technological development. Is the Fed part of the problem? Probably. Is it the only issue we need to address? Not even close. Please think of the big picture before freaking out about not moving quick enough to reformulate monetary policy in the USA. I encourage the dciussson and ask that those of you interested go to the Occupation and go around on your own volition to form a study group on the subject. This way, you can form proposals for joint action which will be tempered by the heat of a wide variety of opinions before being put into the crucible of the General Assembly.
